About Me

I am passionate about my skill in software development and designing to create innovative and interactive software. Along with hands-on experience in website development, I have created number of android applications.

Practicing both frontend and backend web developing for 3 years I am also experienced working with various frameworks. I enjoy complex problem solving with logical thinking and have a good practice of UI UX designing.

I am looking for opportunities to use my passion for developing software for larger purposes and eager to learn from the industry to enhance my skills.

Projects
